

# Storm Drainage System

2001-2003

- Storm water outfalls were discharging runoff into the Monterey Bay National Marine Sanctuary.
- All of the outfalls were undermined by beach erosion.
- Four outfalls were removed & alternative retention basins were built in the Fort Ord Dunes State Park.
- Former Fort Ord developments are required by the land use jurisdictions to dispose all storm water on-site.
- The retention basins will be removed & the dunes restored under a contract with the CA Department of State Parks.
- Utilized EDA Grant Award No. 07-49-05043 funds.
